HashMap in Java

```
import java.util.*;
public class Hashing {
  public static void main(String args[]) {
       //Creation
      HashMap<String, Integer> map = new HashMap<>();
      map.put("India", 120);
      map.put("US", 30);
       map.put("China", 150);
       System.out.println(map);
       map.put("China", 180);
       System.out.println(map);
       if(map.containsKey("Indonesia")) {
           System.out.println("key is present in the map");
       } else {
           System.out.println("key is not present in the map");
       System.out.println(map.get("China")); //key exists
       System.out.println(map.get("Indonesia")); //key doesn't exist
       for( Map.Entry<String, Integer> e : map.entrySet()) {
           System.out.println(e.getKey());
           System.out.println(e.getValue());
       Set<String> keys = map.keySet();
       for(String key : keys) {
          System.out.println(key+ " " + map.get(key));
```

```
//Removing
map.remove("China");
System.out.println(map);
}
```
